

Hydroviteon.CR®

Hydroviteon CR is the highest-quality medicated cleanser used to normalize the physiological functions of the skin. The results are absolutely startling: after just one application, the skin looks healthier, smoother, more consistent, and has a dramatically improved texture. Developed for oily and acne prone skin, this cleanser has also proved remarkable for all skin types due to its intense moisturizing and calming properties. Hydroviteon CR can be used on the most sensitive skin without any irritation. No matter what your skin type, this cleanser will work miracles on your face.

Hydroviteon CR is also perfect for people who have oily or acneic skin that is at the same time sensitive, dry, and irritated. Hydroviteon CR provides the following benefits:

- Thoroughly removes impurities without disturbing the skin's natural moisture balance.
- Deep cleans and removes toxins.
- Softens and conditions skin.
- Calms and soothes the skin.
- Eliminates surface bacteria.
- Exfoliates dead surface cells.
- Refines the skin's texture.
- Combats environmental assault.
- Anti-inflammatory and healing properties.
- Eliminates skin redness and blotchiness.
- Suitable for people with rosacea.

Your face is the first thing people see and having smooth, healthy-looking skin can make a huge difference in your life. Hydroviteon CR is simply the finest quality product that you can put on your face.

Ingredients - Deionised Water, Sodium Lauryl, Ether Sulphate, Cocoamidopropyl Betaine, Polysorbate 20, Cocamide DEA, Propyleneglycol, Chamomile Extract, Rosemary Extract, Hidroviteon, Sodium Citrate, Methyl Paraben, EDTA and Fragrance.

FREQUENTLY ASKED QUESTIONS

Q: How is Hydroviteon CR different from other face cleansers and soaps?

A: Hydroviteon CR is not just a cleanser designed to remove impurities from the skin. It is specifically designed to normalize the physiological functions of the skin, correct the pH, and improve the functioning of the sebaceous glands. The difference can be seen after just one or two application and smoother, healthier skin texture is revealed.

Q: Can I use a moisturizer during the day after washing my face with the Hydroviteon CR?

A: Yes, as long as the moisturizer is appropriate for your skin type, preferably containing a sun filter.

Q: Does Hydroviton CR dry the skin?

A: No, because drying the skin causes the body to produce even more oil, creating a vicious cycle. The treatment removes excess oil while deeply moisturizing the skin at the same time.

Q: How long does it take before the first results can be seen?

A: During the first week it is possible to see the control of oiliness and the reduction in skin eruptions. Within days the treatment begins to normalize sebaceous secretion, reducing inflammation and making the skin smoother and healthier.

Q: The regimen worked, and my skin has improved considerably. Do I need to keep using Hydroviton CR?

A: Hydroviton CR is an ideal continuous treatment for ongoing care of your skin. Once your skin has improved from the treatment, continuing the use of Hydroviton CR will help maintain optimal skin health.

Q: I have been using Hydroviton CR for acne. If I stop the treatment will the acne return?

A: A definitive solution for acne still does not exist, so you need to continue the treatment as long as the problem persists.

Q: Why is it more common to have problems with acne during adolescence and what causes acne in adults?

A: During adolescence there is an increase in the production of testosterone (the male hormone present in both sexes), which makes the sebaceous glands more active. During adulthood it is common to experience the same hormonal imbalance due to stress or menopause. The use of certain types of medicine, inappropriate cosmetics, excessive exposure to sunlight, and eating certain foods can also cause acne in both adolescents and adults.

Q: When should treatment be sought from a dermatologist?

A: When nodules, hard lumps or cysts form under the skin. In such cases, orally-issued medication is usually prescribed, which, when used with Hydroviton CR, will be even more effective.

Q: Can Hydroviton CR cause allergies?

A: Hydroviton CR is hypoallergenic and therefore does not cause allergies in the vast majority of people. In exceptional cases of hypersensitivity to one of the ingredients, treatment must be stopped immediately and medical advice sought.

Q: The second time I bought Hydroviton CR I noticed that it was a different color. Is this normal?

A: - Yes. The plant extracts contained in the cream can change color depending on the harvest or the way the plants were gathered. Changes in color may be more noticeable in our products due to the high concentration of these extracts and the fact that we do not use artificial colorants.
