

# Trioxil®

## **Trioxil® (bisazulene gel) 14% is a totally new innovation in acne treatment.**

Trioxil® (bisazulene gel) 14% is a new powerful anti-bacterial and anti-inflammatory compound that is at the same time soothing and calming on the skin – a moisturizer is not needed.

Stronger anti-bacterial activity against P. Acnes than Benzoyl Peroxide.

Most people see a significant improvement in acne and over-all condition of the skin in just 2 weeks of use.

Encapsulated in nanosomes – tiny microspheres penetrate into the deepest layers of the skin to release the active ingredients over a 12 hour period.

Bisazulene is a new compound that is unlike anything else you have tried before.

Trioxil® (bisazulene gel) 14% is a modified form of naturally occurring compound found in chamomile flowers and encapsulated in nanosomes. The pharmacological activity of this compound has been shown in clinical studies to be antibacterial, antimicrobial, fungicidal and at the same time anti-inflammatory. If you have tried other acne medications containing benzoyl peroxide, salicylic acid, and tretinoin that did not work for you then Trioxil® may be a solution for your acne – it is a totally new innovation and a remarkable breakthrough in acne treatment.

While other acne medications containing benzoyl peroxide, salicylic acid, or tretinoin have strong antimicrobial activity on Propionibacterium Acnes, these medications cause severe over-drying and irritation of the skin. This causes the body to respond by producing even more oil to combat dryness thereby starting a vicious never ending cycle. Trioxil® is the only acne medication that has antimicrobial activity against Propionibacterium Acnes bacteria while at the same time deeply calming and soothing the skin. In fact, the bisazulene compound (a very strong antimicrobial and antibacterial) is actually derived from chamomile flowers which have soothing and calming properties. Thus Trioxil® treats both of the underlying causes - the bacteria involved in acne pathogenesis and the inflammatory response of acne.

### **Other ingredients:**

Extracts of Ginseng, Hamamelis, Wheat-germ Nanosomes, Barley-germ Nanosomes, Arnica Nanosomes, deionised water, yeast and horse chestnut, D-Panthenol, Alpha Bisabolol, Tea Tree Oil, Isopropyl Myristate, Polysorbate 80, Triethanolamine, Carbomer, and Methyl Paraben.

### **Get ready for perfect skin:**

Trioxil® (bisazulene gel) 14% is indicated for mild to moderate facial acne vulgaris and requires just one application per day. You should apply a thin layer (more is not better) over the entire facial area after washing gently with a high quality cleanser.

Apply one pea-sized dose to cover your entire face, avoiding the more sensitive areas around your eyes, nose and corners of the mouth. Don't spot treat by putting more Trioxil® directly on the pimples. This won't clear them up faster. Dab it on your forehead, chin and both cheeks. Spread evenly over your entire face.
